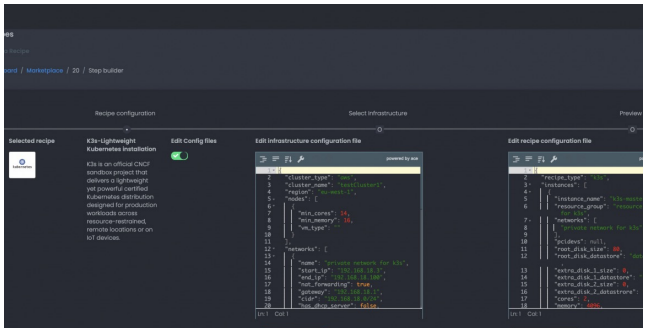
SUNLIGHT

AppLibrary

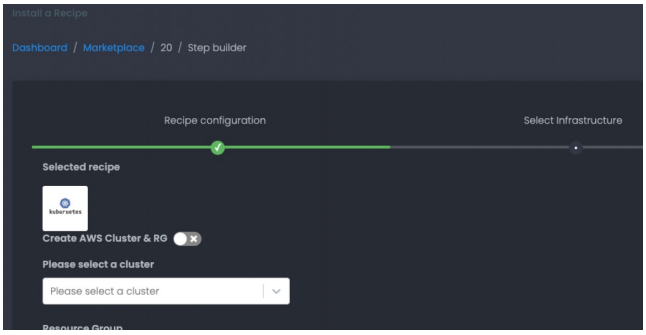
Automate the deployment of applications and infrastructure

The Sunlight AppLibrary, a component of Sunlight NexCenter, enables automation of resource configuration and on-demand application deployment onto the Sunlight platform, an integrated Infrastructure as Code process. It is designed to fully automate the end-to-end deployment of application environments, utilizing the optimum performance offered by the Sunlight platform. The Sunlight AppLibrary is leveraging the power of the Ansible framework to manage the deployment of applications.



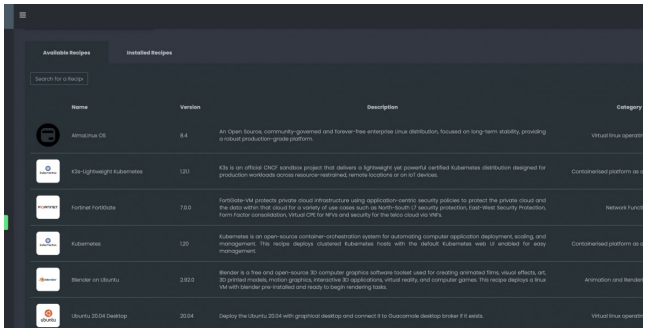
Infrastructure as Code

- ❑ Built on Ansible Framework.
- ❑ Pre-Installed Recipes available out the box.
- ❑ Import existing Ansible Playbooks into AppLibrary.



Fully Customizable

- ❑ Edit Recipes for your environments.
- ❑ Integrate with Terraform for end to end provisioning.
- ❑ Accessible via NexCenter API.



Automate Deployments

- ❑ Deploy applications on demand with a single click.
- ❑ Unlimited Edge locations.
- ❑ Choose a pre-built application or build your own.
